## PROGRAMA EZAZU SCRATCH-EKIN:

Bandera berdean klik egitean, sar zaituz 'betiko' begizta batean. Begizta horrek etengabe egiaztatuko du panpina distantzia-sentsorera hurbiltzen den ala ez.

Panpina distantzia-sentsorera hurbiltzean, hau da, distantzia-sentsorearen balio orokorra 50 baino baxuagoa denean, motorraren ahalmena eta norabidea konfiguratuko dira; eta, horrekin batera, motorra piztuko da, erraldoia lurretik altxa dezan.

Behin erraldoia altxaturik, hau da, distantzia 50 baino altuagoa denean, motorraren norabidea aldatuko da berriro jaitsi dadin.
